**online workshop for Android developers**

date: 12.07.2024

ANDROID TESTING WORKSHOP

In today's competitive app market, robust testing practices are crucial for delivering high-quality Android applications. The Android Testing Workshop is designed for Android developers looking to elevate their testing capabilities and ensure their apps meet industry standards and user expectations.

During the workshops...

you will learn everything that you need to know about Android application testing.
which will result in...

Higher quality

Derived from integrating best practices that cater to both business requirements and an enriched developer journey.

Expand in competencies

Transitioning a developer from mid to senior, fostering versatility across various facets of software development.

Greater efficiency

Through the adoption of methods that enhance swift resolution and dedication to tasks.

Who this program is for?

- The course is designed for mid and senior programmers who want to improve their software craftsmanship skills
- For devs who faced a ceiling in coding and want to transition into lead role
- For programmers who faced problems with building Android apps at scale

What are the benefits for your team?

- They will develop their skills in solving large-scale technical problems with the business context in mind
- They will become familiar with the broad context of the application design process in the large scale
- They will become familiar with reliable and effective techniques whose use will translate directly into increased efficiency

499€

The price includes a 12 month license for 1 person to the Program, additional materials, source code and access to the community on Discord

In invite you to participate
